

About the job

We are seeking a talented and motivated Data AI Engineer to join Client's project. As a Data Engineer, you will be responsible for developing and implementing data-driven artificial intelligence solutions that drive actionable insights and help optimize investment decisions for company. You will play a key role in developing and fine-tuning prompts that drive the generation of high-quality and contextually relevant content from AI models for the deal memos. You will work closely with the team to design and optimize generative AI systems that produce compelling and coherent outputs.

Responsibilities:

- Collaborate with our team to understand the requirements and objectives for generating AI-driven content in various domains, such as creative writing, chatbots, sales assistants, virtual assistants, deal memos, or content generation for specific applications.
- Design and develop high-quality prompts and guidelines that effectively guide AI models to generate coherent and relevant outputs.
- Conduct thorough research and analysis to identify optimal techniques, architectures, and strategies for prompt engineering and content generation.
- Develop and fine-tune prompt templates, input formatting, and control mechanisms to influence the behavior and output of AI models.
- Collaborate with the General Partners to identify business problems that can be addressed using AI and machine learning techniques, and define clear objectives and success criteria.
- Develop and maintain data pipelines and data integration processes to collect, transform, and clean structured and unstructured data from various sources.
- Implement and optimize machine learning algorithms for classification, regression, clustering, recommendation systems, or other relevant AI applications.
- Evaluate and select appropriate AI technologies, frameworks, and tools to support data-driven decision-making and enhance predictive capabilities.
- Develop and deploy AI models into production systems, ensuring scalability, performance, and reliability.
- Stay up-to-date with the latest advancements in AI, machine learning, and data engineering technologies, and propose innovative solutions for business challenges.

Qualifications:

- Bachelor's degree or higher in Computer Science, Data Science, Engineering, or a related field. Advanced degrees are preferred.
- 3+ years of experience working as a Data Engineer.
- Experience with AI technologies and frameworks such as TensorFlow, PyTorch, scikit-learn, or similar.
- Strong knowledge and hands-on experience in data engineering, data manipulation, and data preprocessing techniques.

- Proficiency in programming languages such as Python, Java, or Scala, along with expertise in SQL and experience with big data processing frameworks (e.g., Hadoop, Spark).
- Strong problem-solving skills and the ability to translate business requirements into technical solutions.
- Solid understanding of machine learning algorithms, statistical analysis, and data modeling techniques.
- Familiarity with cloud platforms (e.g., AWS, Azure, Google Cloud) and their data services.
- Excellent communication skills to collaborate effectively with cross-functional teams and present technical concepts to both technical and non-technical stakeholders.
- Experience with Agile development methodologies and version control systems.
- Familiarity with DevOps practices and the ability to deploy and manage AI models in production environments is a plus.

Why you'll love working here:

- Attractive salary.
- Hybrid working, flexible working time from Monday to Friday.
- Attractive salary with 100% salary during probation.
- Fully paid compulsory insurances after probation.
- Opportunity to work with international clients and peers.
- Healthcare package after probation.
- External and Internal Training Opportunities are sponsored by company.
- 13th month salary.
- Provide all necessary equipment.
- Entitled to 15 paid days off and 05 medical days off per year
